---

*"David Henderson provides a delightful personal narrative of a libertarian's lifelong journey through the maze of modern government policy. He demonstrates how straightforward economic reasoning can expose the multitude of fallacies that are used to justify government's role in the economy -- in matters as diverse as modern environmental policy and the military draft. This is a must read for non-economists and particularly for those who obtain most of their information from The New York Times, National Public Radio, or CBS Evening News."*
